

News for 02/28/06

Hi,

We are updating our brochures with popularly requested information, and imminently, new wet flow images. Here is a sampling.

John

dAM Small Billet Carb **"The switch is on..."**

If your engine makes under 650 HP, this is the carb for you. This carb is positively mean. It will give your engine a new sound - like that of a bigger engine. And hang on when you hit the throttle: it'll feel like it too!

The lightweight billet body, with patent pending design allows the air to cradle the fuel droplet in a totally new way reducing wall wetting - a major problem in previous carburetor designs.

Simple, elegant lines aid in air movement. It flows 528 CFM at 10" of water and 761 at 20". Venturi diameter is 1.250". Standard hardware allows for easy and inexpensive tuning.

With a 50% increase in booster signal and *dAM's* patented Emulsification System, there is about 50 times the emulsion in previously modified carbs: the droplets are 50 times smaller and there are 50 times more of them.

Every *dAM* carb is serial numbered with it's own build sheet, and wet flow sheet.

***dAM* Mid-size Billet Carb**

"The switch is on..."

The most powerful carb of its size - its light weight, patent pending billet housing and *dAM's* patented emulsion system provide 50% more booster and about 50 times the emulsification of modified other brands.

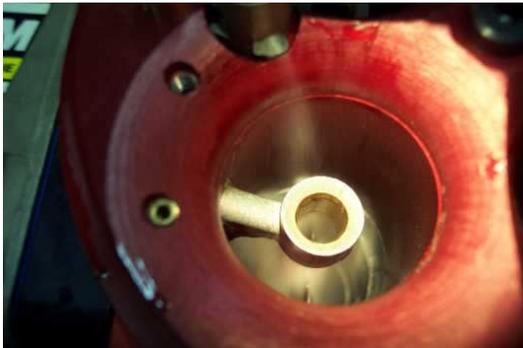

Simple and elegant. Use of Standard hardware in its

circuits means simple and inexpensive adjustment. At 10" of water it flows 650 CFM; at 20", 933 CFM. Venturi diameter is 1.395". It's recommended for engines of 500 to 750 HP.

The patent pending design was created to take into account air cleaners and air pans to aid in air distribution around the booster and through the manifold.

Each carb has its own build sheet and serial number. Fuel distribution is the name of the game. How well does your carb work.

*Every dAM carb is serial numbered with it's own build sheet, and wet flow sheet.

dAM Large Billet Carb

"The switch is on..."

The *dAMBEST* billet carb is the most powerful and responsive carb of its size. Every angle of

throttle position is adjustable. And adjustable linkage allows control of the rate at which the secondary is applied.

Every effort to improve performance and simplify carb design was made. The carb's billet design allows for custom sizes and lighter weight. This carb flows 1100 CFM at 20" of water. Venturi diameter is 1.585". It's recommended for engines of 700 to 850 HP.

The patent pending design has improved booster signal by 50%, reducing manifold wetting by surrounding the fuel being distributed by the booster with a layer of air to keep fuel off of the walls.

dAM has five US patents in fuel emulsion technology incorporated into the metering blocks to reduce droplets to previously unattainable size. Common hardware makes tuning easy and affordable.

Every dAM carb is serial numbered with it's own build sheet, and wet flow sheet.
